

HYD Precision Electronics Co.,Ltd.

Precision Mold & Injection Molding Manufacturing Expert · Corporate Overview

August 2026

Contents

01 Company Overview

Dual-base layout: Kunshan Headquarter and Wuhu Plant – covering from mold design to mass production

02 Parts Introduction

Automotive Seating, Lighting , Thermal Management Systems, and Multi-injection Exterior/ Interior parts

03 Mold Capabilities

16 designers, over 40 sets precision machining facilities

04 Manufacturing Capacity

Wuhu new plant started from March 2026: 34 sets IMM, with an annual output of 300 million parts

STRATEGIC FOOTPRINT

Dual-Base Strategy

Kunshan (Head quarter) + Wuhu (Manufacturing Base) with a 300kms integrated industrial chain, enabling seamless transition from precision mold development to high-volume production.

Kunshan Headquarters

- ✓ Started in March 2003, total investment: RMB 80 million, covering an area of 9,500 sqm. Specializes in precision mold design, manufacturing, and production.
- ✓ Equipped with a full set of mold manufacturing machines 40 sets, including imported high-speed CNC, mirror polish EDM, fine wire-cutting, millers, grinders, plus 16 sets of IMM.

Wuhu Manufacturing Base

- ✓ Started in March 2026, covering an area of 32,000 sqm (approx. 50 mu).
- ✓
  - Phase I: 34 sets IMM (140T – 1850T), including 2 sets of 2K machines.
  - With Mucell and gas assisted injection capability.
  - Automotive Headlamp assembly line and painting line.
  - Annual capacity: 300 million parts.

Milestones: From Foundation to Growth

Over two decades, HYD has grown from a small mold workshop into a group-level enterprise through four-stage growth, aligning with the rapid development of Chinese automotive industry.

2003 · Company Foundation

-Officially established in 2003. Initially focused on precision mold manufacturing, setting the core principle of "technology-driven development" and building a foundation in process capability and quality reputation.

2010 · Business Expansion

-Qualified as an approved mold supplier for OEMs including SAIC Volkswagen (SVW) and SAIC General Motors (SGM), marking industry recognition of HYD's mold capabilities.

2015 · Scale-Up

-Phase II of Kunshan tooling plant started in 2015, by buying over 20 sets of machines including 5-axis CNCs and injection molding machines. Annual production reaches 300 sets of molds.

2023 · Strategic Layout

-Launched new Wuhu plant, was planned in two phases with a total of 50+ sets IMM. Marked the transition from a single-site operation to a dual-base synergy (Kunshan + Wuhu), entering a new stage of group-level development.

GLOBAL PRESENCE

Global Service Network

HYD operates a dual-base domestic footprint plus two overseas centers, delivering end-to-end global service capabilities – from technical consultation and mold design to product delivery.

European Technical Service Center

-Located in Sarrebourg, France (7 Rue de Lupin). Serves European clients with mold technical support, project coordination, and after-sale service.

-Run by a dedicated team, with local technical staff for real-time communication and rapid response to engineering changes and quality feedback.

Real-time technical support (no time zone gap)

Mexico Manufacturing Base

-Located in Quer taro Industrial Park, Mexico (Benito Juárez 113-A). Launched in June 2025. Team of 20 employees, supporting localized manufacturing and delivery in North America.

-Equipped with 3 CNC machining centers, 1 wire EDM, 1 EDM machine, and 2 milling machines. Capable of mold repair, modification, and small-batch injection molding.

Launched in June 2025

Domestic Dual-Base Synergy

-Molds are validated in Kunshan before being transferred to Wuhu for volume production, ensuring process stability and seamless transition from development to manufacturing.

300km industrial chain synergy with China

Company Name Interpretation & Core Values

鸿（HONG）- Ambition

In Chinese, “鸿” stands for a great swan or grand vision. It symbolizes the pursuit of excellence and high aspirations – from a local base in Kunshan to a global presence, reflecting the company’s ambition for continuous growth and industry leadership.

Leading the company to continuously push boundaries.

毅（YI）- Perseverance

In Chinese, “毅” stands for firmness and unyielding will. It embodies over 20 years of resilience in precision manufacturing – staying committed to quality, overcoming technical challenges, and embracing a spirit of continuous improvement.

Passing down the spirit of craftsmanship with relentless pursuit of perfection.

达（DA）- Delivery

In Chinese, “达” stands for achievement and reaching goals. It represents the company’s absolute commitment to meeting lead times and quality standards – ensuring fast and reliable execution from order intake to final delivery.

Building the cornerstone of customer trust.

Five-in-One Corporate Values

Innovation – Investing in micro-foaming and two-shot technologies.

Integrity – Certified to IATF 16949 and other quality standards.

Quality – Precision inspection via CMM and blue light scanning.

Gratitude – Valuing long-term relationships with customers and partners.

Service – Providing responsive support at every stage.

Flat Management Structure

The company operates a three-tier flat structure: Management – Supervisors – Execution. This eliminates lengthy reporting chains, allowing critical information to reach decision-makers directly, significantly improving response time and efficiency.Internally, operations are organized around three core centers – Injection Molding Center, Mold Center, and Equipment Center – forming a professional matrix collaboration. This balances manufacturing depth with management flexibility, ensuring smooth integration from R&D and pilot runs to mass production, and providing customers with more agile and reliable delivery and service support.

Injection Molding Center	Mold Center	Equipment Center
Lean Manufacturing	Agile Response	Collaborative Support

Ensuring service standards that deliver on commitments

CHAPTER 02

Product Introduction

Seating · Lighting · Thermal Management · Exterior

Seating Series

As a core supplier to the seating industry, HYD delivers millions of parts annually, covering the full range from miniature precision components to large structural parts.

- **Comprehensive product range:** including seat back panels, headrests, side trims, motor mounting brackets, seat pan plastic parts, and wire harness fixing brackets – covering key structural and functional components of seat systems.

BJEV X90 Headrest

NCUB Headrest

Key structural component for seat adjustment systems. Materials: PP-GF30, POM, PA66, and other engineering plastics. Weight range: 0.67g to 1,223g with precision.

Seating - Representative Products

VW C-series Motor Bracket Platform Part

EHV Cable Carrier

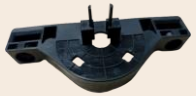

Li Auto W10A Seat Back Panel

Ford C519 Seat Side Panel

358-2 Spacer

Track SL Long Rail Platform Part

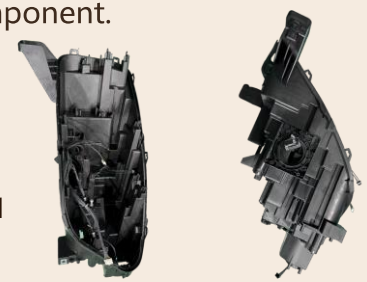

CMS1.5 Seat Pan Connector Platform Part

Lighting Series

We provide a full range of injection-molded structural and cosmetic parts for automotive lighting systems, serving major programs for Mercedes-Benz, Geely, Chery, etc. With our new Wuhu plant molding cluster and automated assembly lines, we offer one-stop delivery from molding to pre-assembly.

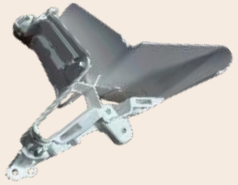

Product Structure

Housing: mounting base for adjustment sub-assembly, bearing adjustment torque. Requires high strength and dimensional stability. Core structural component.

Geely KX21

Reflector: key optical component in headlamps, mounted inside the housing behind the projection lens. Works with the light source and lens to form the optical system.

Mercedes V540

Product Structure

Bezel: combined structural and cosmetic part inside the headlamp assembly. Functions: assembly positioning, stray light shielding, aesthetic styling, and sealing support.

Geely CS11

GM C1UB

Thick-Wall Light Guide: transparent optical component in PMMA/PC. Features light-concentrating structures at the front end for improved light input efficiency, and uses total internal reflection (TIR) to achieve uniform illumination across the entire length.

VW 316/326

Manufacturing Extension

Automated Assembly: Dedicated headlamp assembly equipment at Wuhu plant for automated assembly of adjustment sub-assemblies, wire harnesses, and ball studs. Two-in-one equipment layout improves efficiency.

Precision Assembly Control: PLC touch-screen control, sensors for missing part detection, and electronic scale for press-fit positioning, ensuring accuracy and consistency. Cycle time: 25–45 seconds per part.

One-Stop Delivery: Value-added delivery from molded parts to sub-assemblies, reducing secondary assembly steps and improving supply chain efficiency. Annual capacity: nearly 1 million sets.

Thermal Management Series

HYD has expanded into thermal management systems, developing manufacturing capabilities for key injection-molded components in electronic water pumps.

Products & Materials

Supplying electronic water pumps and thermostat housings in PPS+40%GF or PA66+30%GF– materials that meet high-temperature resistance, hydrolysis resistance, and durability requirements.

These materials offer excellent creep and fatigue resistance. With material modification and structural optimization, they support a service life of over 10 years.

Products are used in SAIC and VW new energy vehicle programs, demonstrating systematic capability from material selection to structural design.

ZP22 VAVE TMP100 Stator

ZP22 VAVE TMP100 Pump Housing

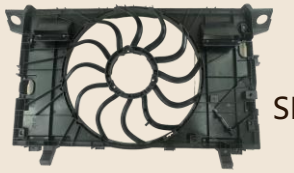

SVW B Car Thermostat Housing

358-2 150W Isolation Canister

Other customer applications:

Fan Shroud
Material: PP-LGF30

SHB Fan Shroud

As a key aerodynamic component in the vehicle thermal management system, the fan shroud is not only the physical carrier of the fan, but also a multiplier of cooling efficiency. It provides efficient airflow concentration and guidance, serves as a system safety barrier for the high-speed rotating fan blades and the radiator core, and precisely supports the motor weight and operating torque, ensuring positional stability under long-term vibration conditions.

Exterior Multi-Shot Series

HYD has expanded automotive exterior trim, building multi-material, multi-process manufacturing capabilities and demonstrating full-category production from functional parts to decorative components.

Exterior Multi-injection Products

Providing A/B/C pillar interior and exterior trims panels, charging port covers, and other two-shot products. Material systems include PMMA/ABS/PC+PET and TPS, with graining processes and special structure to achieve the good combining between soft and hard parts.

Produced on 700T and 1300T 2K IMM. One-shot molding integrates rigid substrate with soft sealing lip, eliminating secondary assembly steps.

Mercedes BR449 B-pillar Trim Panel (3K)

EHV A-pillar Inner Panels LH/RH (2K)

L946 B-pillar Trim Panel (2K)

Geely SC02 Door Seal Strip (2K)

Geely HS11 Accelerator Pedal Cover (2K)

Other customer applications:

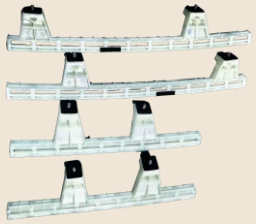

Charging Port Box

Geely SC02 Charging Port Box (2K)

Made of ASA material, offering excellent weatherability and UV resistance, meeting long-term outdoor use and the demanding environment of EV charging ports. Surface gloss remains stable, resistant to fading and aging.

Glass Guide Rail

EHV Guide Rail

Made of PBT material, providing high precision and wear resistance, ensuring smooth and quiet window operation with durability under high-frequency use. Precision molding ensures consistent fit clearance.

Mucell Molding Series

HYD has developed advanced capabilities in Mucell injection technology, providing customers with cost-effective solutions and achieving mutual benefits.

Mucell Process & Products

MMuCell® micro-foaming technology was originally developed by MIT and exclusively commercialized by Trexel Corporation. It uses supercritical fluid (N or CO) to generate and expand micro-cellular structures in the part core layer.

HYD has extensive development experience in micro-foaming molding for automotive center console parts, headlamp housings, and door panel components. Main customers include Grammer, Marelli, and Hi-Lex.

Examples

BMW G01/02/08 Center Console Frame

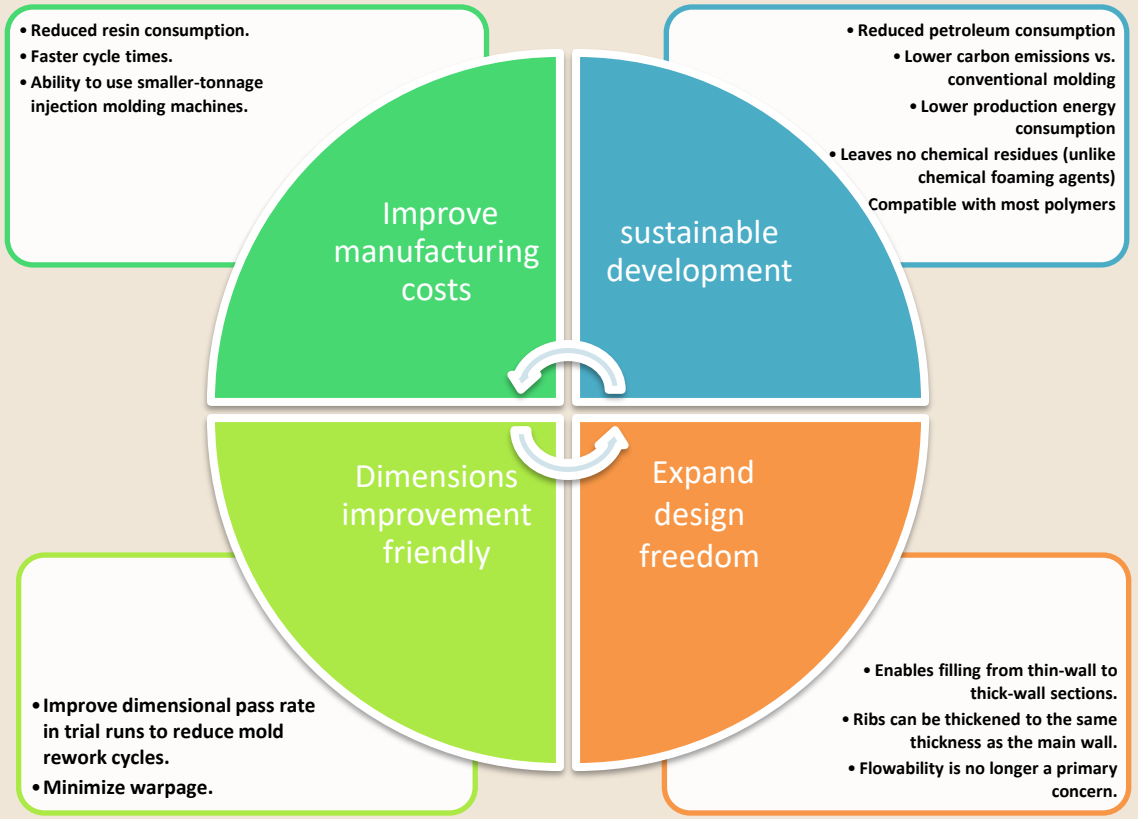

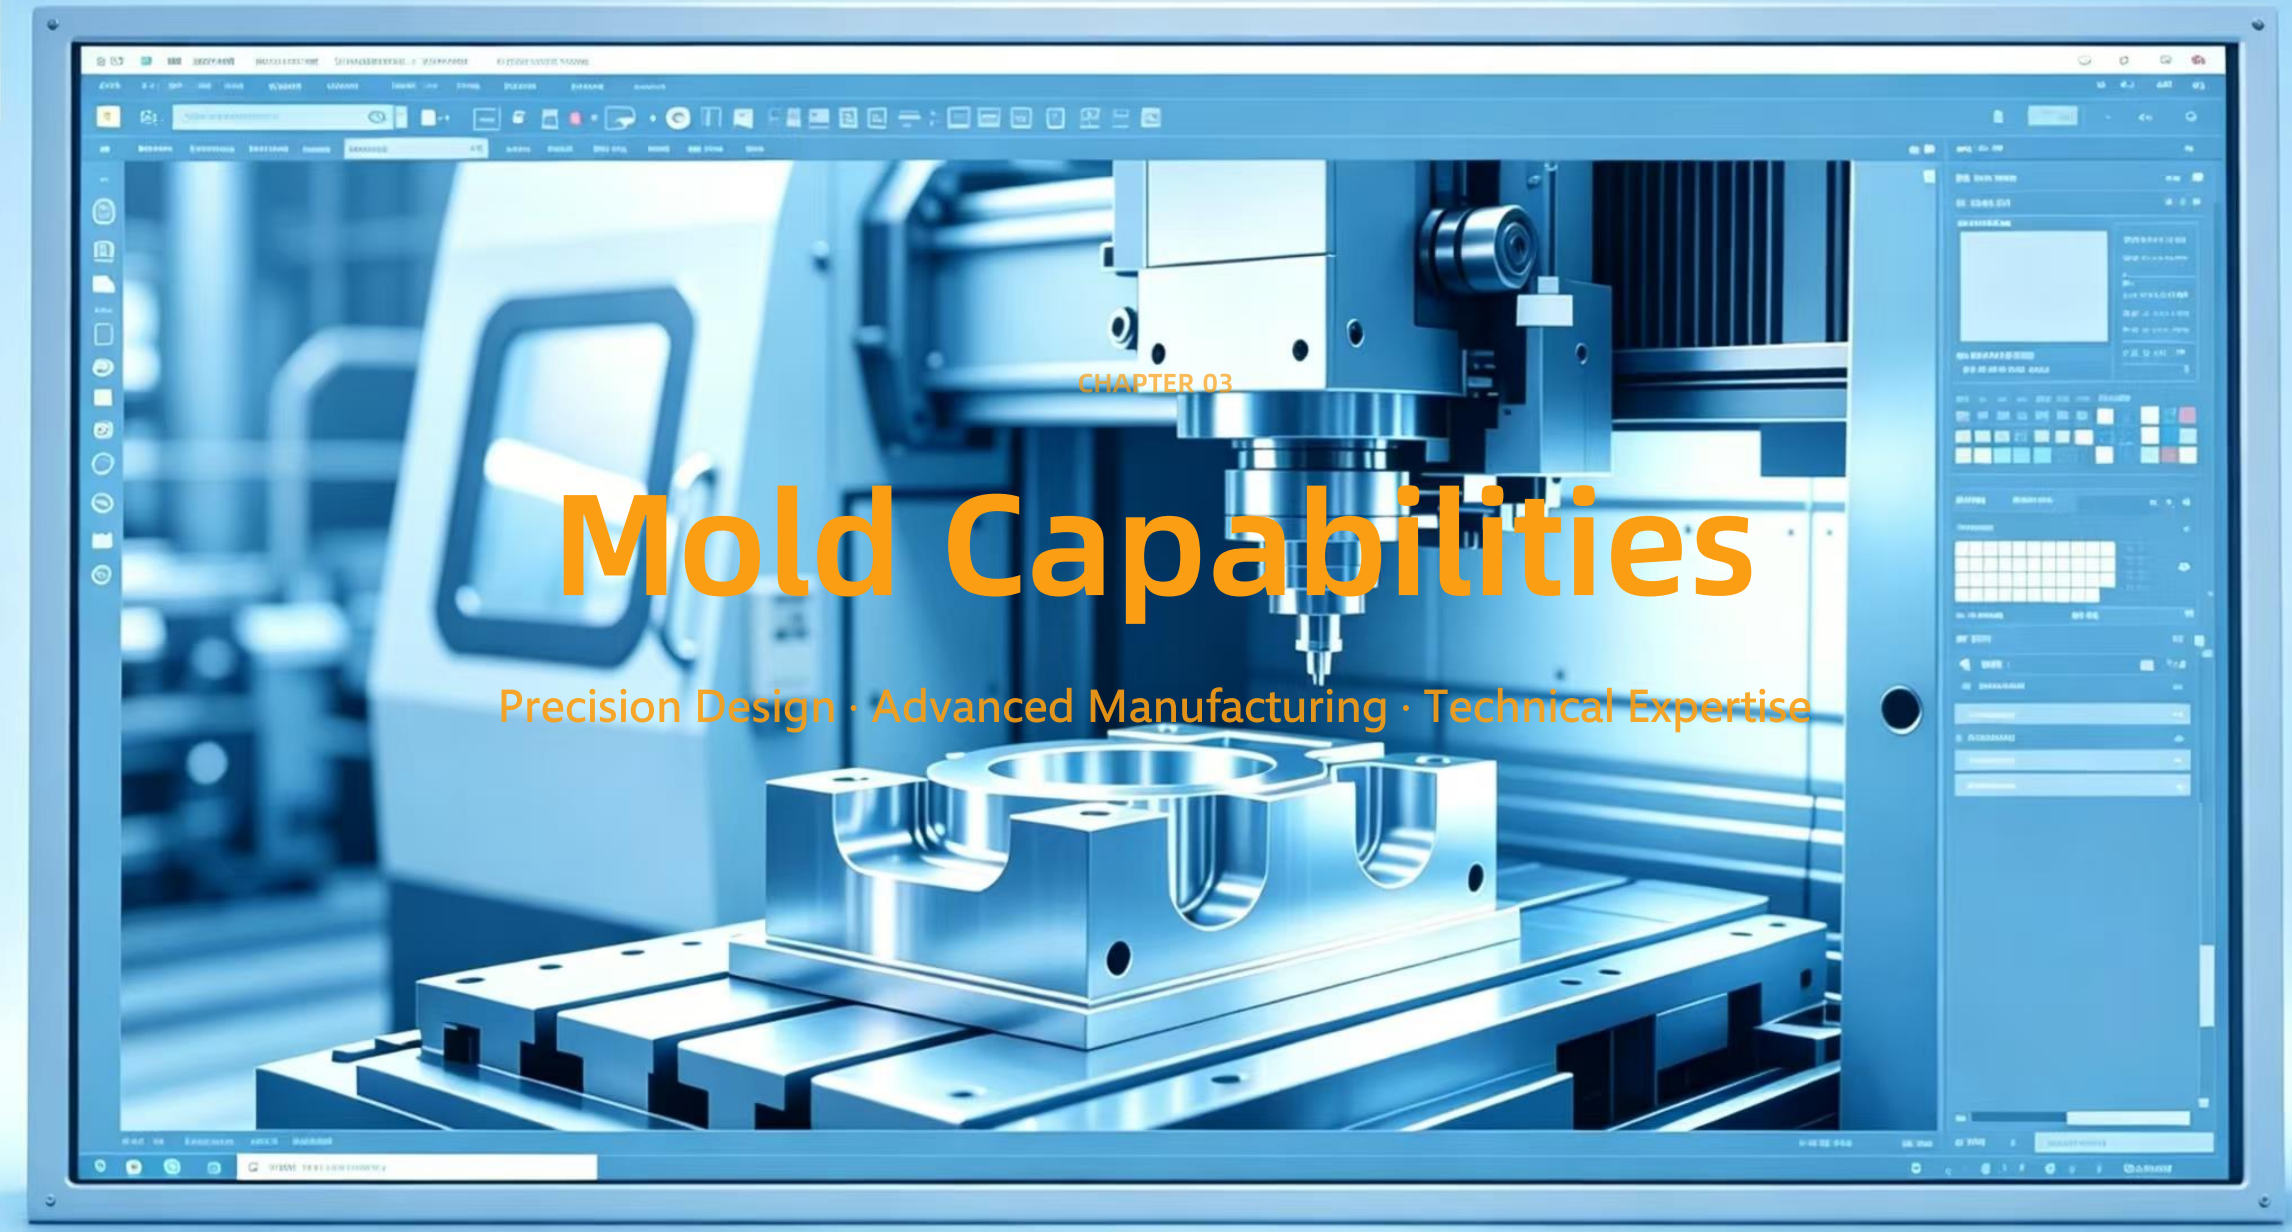

Huawei X2411 Door Panel

Geely L946 Headlamp Housing

Advantages of Mucell Technology

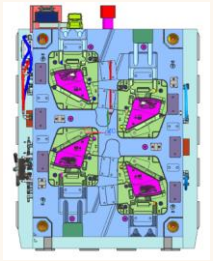

CHAPTER 03

Mold Capabilities

Precision Design · Advanced Manufacturing · Technical Expertise

Mold Design Capabilities

Exterior Rearview Mirror

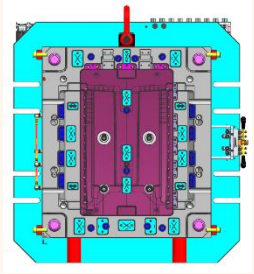

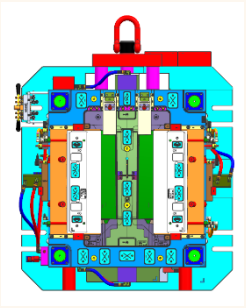

Design Capabilities

Design Team: 16 engineers skilled in UG NX, Pro/ENGINEER, AutoCAD, and PowerMILL. Capable of complex surface parting line design and multi-gate hot runner system design.

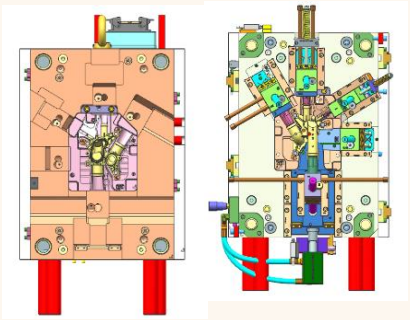

Moldflow Analysis: 2 Moldflow-certified engineers providing filling analysis, sink mark prediction, and warpage analysis. Identifies potential quality issues at the design stage, reducing trial run cycles by over 30%.

Design Scope: Full-chain capability from concept design to detailed engineering. Average annual mold designs exceed 200 sets.

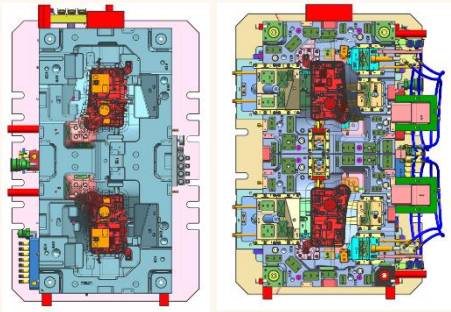

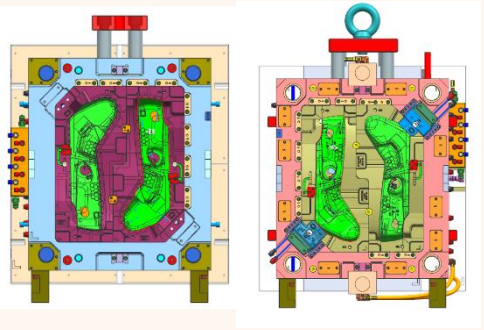

3-shot Trim Panel

Thermostat Housing

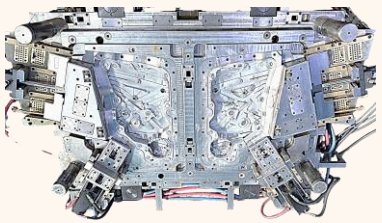

Headlamp Housing

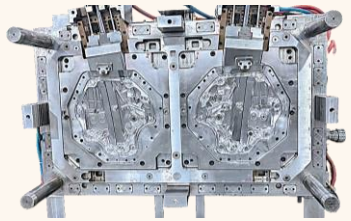

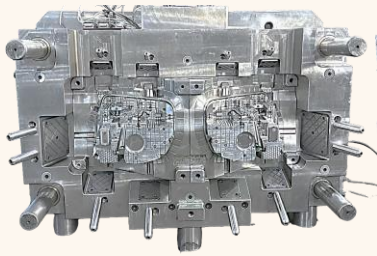

Seating Side Panel

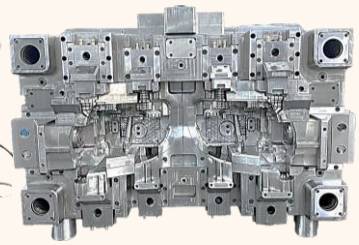

Mold Manufacturing Capabilities

HYD Kunshan facility is equipped with industry-leading mold machining and inspection equipment, forming a complete manufacturing system from roughing, finishing, to precision inspection. Core equipment includes high-speed CNC, EDM, wire EDM, and precision grinders, complemented by CMM, vision measuring systems, and roughness testers – ensuring precision and quality through meticulous workmanship.

Machining Facility

5-axis CNC

Fine Machining

Zeiss CMM

CHAPTER 04

Wuhu Plant Manufacturing Capabilities

Mass Production · Assembly · Painting

MANUFACTURING

Core Manufacturing Capabilities

Wuhu New Plant is equipped with 34 injection molding machines ranging from 140T to 1850T, covering full tonnage range. Integrated with automated headlamp assembly line and exterior painting line, forming vertical integration from raw material to finished product.

Injection Molding Machine Cluster

Phase I: 34 sets injection molding machines, tonnage range from 140T to 1850T, including 2sets of 700T and 1300T 2K IMM.

Machines are arranged in A/B/C rows, capable of producing parts from 0.5g precision small components to 4000g large structural parts. Materials cover PP, PA66, PBT, PC/ABS, and other engineering plastics.

34

machines across full tonnage range

Automated Headlamp Assembly Line

Equipped with dedicated headlamp assembly equipment for automated assembly of adjustment sub-assemblies, wire harnesses, and ball studs.

PLC touch-screen control, sensors for missing part detection, and electronic scale for press-fit positioning ensuring assembly accuracy and consistency.

Two-in-one equipment layout for improved space utilization. Annual capacity: nearly 1 million sets.

35-50

seconds per part

Exterior Painting Line

Providing one-stop exterior solutions from injection to painting, equipped with the paining line.

Approved environmental assessment (Wuhuan Xingshen [2025] No. 134), with comprehensive exhaust treatment and environmental protection facilities.

Class A

Surface quality standard

Injection Molding Launch Date

March 2026

Vertical integration · One-stop delivery from raw material to finished product.

Company Spirit & Future Vision

Driven by the dual-base strategy of Kunshan Mold Headquarters and Wuhu Manufacturing Base, we are committed to becoming a preferred precision manufacturing solutions provider for our customers.

Core Strengths

01 Dual-driven approach: mold design capabilities and high-volume injection molding. 20 years of design expertise and over 40 precision machining units form a solid technical foundation.

02 50 injection molding machines (including 34 in Wuhu) covering 140T to 1850T. Kunshan-Wuhu dual-base synergy ensures seamless transition from mold development to production delivery.

Continuous investment in advanced equipment and process development, maintaining technological leadership in the industry.

Customer Value

01 Serving global top-tier Tier 1 customers including Yanfeng, Marelli, and Brose. Backed by IATF 16949 quality system, providing annual capacity of 300 million parts with reliability and consistency.

02 European Technical Center and Mexico plant enable global service coverage, shorten supply chain response time, and provide complete service capabilities from technical consultation to product delivery.

Global footprint supports customers' overseas projects with local service and fast response.

Future Vision

01 With the Wuhu new plant launched in March 2026, continuing to deepen expertise in precision automotive injection molding. Annual production expected to reach 300 million parts within 3 years.

02 Focusing on lightweighting and intelligence trends in new energy vehicles. Mastery of advanced processes including Mucell and multi molding. Committed to becoming a preferred precision manufacturing partner for customers.

Proactive development in new materials and processes, leading industry technology direction.
